1.0 Regulatory Statement

The United States Federal Communication Commission has established certain rules governing the use of electronic equipment.

1.1 FCC Certification

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and***
- (2) This device must accept any interference received, including interference that may cause undesired operation.***

This device has been tested and found to comply with the limits for a CLASS B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential installation. This equipment generates, uses, and radiates radio frequency energy and if not installed and used in accordance with the instruction guide, may cause harmful interference to radio communications.

CAUTION: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This radio is compliant with FCC RF Exposure requirements for mobile devices. Users are cautioned to maintain 20 cm from the transmitter to ensure compliance.

CAUTION: The operation of this radio in the 5.15-5.25 GHz frequency band is restricted to indoor use only.

2.0 Introduction:

The 444-2196H Wireless Audio Client device is a production ready module designed for active speakers in Summit Semiconductor's wireless audio technology. The module mounts to the top interior wall of a typical speaker. The module includes a patented, low cost, high gain quad diversity PCB antenna integrated in the module to provide superior wireless performance without external antennas. A 40 pin interface provides, I2S digital audio outputs, power, I2C and GPIO signals for control of the amplifier and power supply.

FRONT SIDE

BACK SIDE

CAUTION: DO NOT TRY TO REPLACE THE ANTENNAS

3.0 Installation and Test Procedure

A host interface board is used to provide the necessary regulated power supply to the 444-2196H Wireless Audio Client device.

The set up is as shown in the picture below.

1	Wireless Audio Client device
2	Integrated Antenna
3	RF Can
4	Multi pin flex cable
5	Hermiston (Interface Board)
6	Power Input 3.3V
7	Reset button
8	RS232 interface
9	Serial cable

3.1 Boot:

- Download Summit Semiconductor's Hood_BIST_0013 software onto your computer.
- Connect a multi pin flex cable from Hermiston (interface board) to 444-2196H Wireless Audio Client device as shown in the picture.
- Connect a 3.3V DC supply to Hermiston (interface board) from a variable or a fixed source.
- Connect the RS232 interface from J9 of the interface board (Hermiston) to the serial cable.
- Connect the serial cable to the computer's COM port.
- Press the reset button for the DUT to boot. Your screen should look as below.

```
C:\Documents and Settings\ponnapp\Desktop\Hood_BIST_0013.exe
Welcome to the Hood BIST Monitor Version 13.
Serial port com1 successfully reconfigured.
FAIL: Failure occurred while reading Address ( 400000).
Processor ID: Unable to Read the Processor ID
Expected FW Version 13, found 13: GOOD
Expected MRG Section Version 104, found 104: GOOD
Expected COEF0 Section to be loaded, and it was NOT. Please load the COEF0 Flash
Section.
Expected COEF0 Section Version 102, found ffff: Please update the COEF0 Flash Se
ction to version 102
Expected COEF1 Section Version 102, found ffff: Please update the COEF1 Flash Se
ction to version 102
Expected COEF2 Section Version 102, found ffff: Please update the COEF2 Flash Se
ction to version 102
Expected COEF3 Section Version 102, found ffff: Please update the COEF3 Flash Se
ction to version 102
You may use the -v command line arg to suppress version checking at start-up.
Type "help" to get help.

```

3.2 Setting Channel, data rate and transmit power

The following transmit command is used to set the transmitter in a particular channel and to start transmitting.

tx -1 1 d 4 8 255

The parameters in the command are explained below.

-1	Transmit continuous control
1	Antenna selected control (A1)
d	Data rate selection (6Mbps)
4	Transmit Power Control
8	Channel selection (5180 MHz)
255	Time out control

Please refer the table below to change frequencies in the transmit command.

Channel No in Transmit Command	Frequency
8	5180
10	5200
12	5220
14	5240
15	5260
16	5280
17	5300
18	5320
19	5500
20	5520
21	5540
22	5560
23	5580

24	5600
25	5620
26	5640
27	5660
28	5680
29	5700
30	5745
31	5675
32	5785
33	5805
34	5825

Example:

- 1) tx -1 1 d 4 8 255 ; The DUT transmits in frequency 5180 MHz
- 2) tx -1 1 d 4 30 255; The DUT transmits in frequency 5745 MHz

3.3 Stop transmitting

The following command is used to stop the DUT from transmitting.

stoptx

4.0 System Requirements

Operation:

PC with COM ports

Programming:

Windows XP and higher
